Section I: Project Description:

Executive Summary:

We started by asking questions. Why are enterprise softwares very complicated and hard to use? What do businesses need to support change and how can software help companies get more time back for what it really matters?

Hubber is a startup software company which aims to revolutionize the way companies manage their business. It aims to deliver an easy to use platform which can be integrated at a reasonable price and a minimal overhead. Hubber's vision is to create the finest and scalable ecommerce software for business of any kind.

The Market: Hubber has identified four distinct business segments that will be interested in its software product. These segments are the most likely consumer of the software. The segments are as follows:

- ***Finance:*** It's essential for any business to keep track of their Finance. After all, the main goal of any business is to have a solid database to keep track of every penny.
- ***Human Resources:*** A business needs to keep record of its employees, their positions, hire date and their overall information. A successful business shall be able to keep track of all the inner workings of its employees, assign projects, and keep their records. It needs to be able to inform its employees about company policies, aim and goal.

- **Inventory:** Inventory management is a key part of the business. Therefore, a company needs to be able to manage its inventory and contact suppliers/vendors on time in order to keep the business functioning without encountering any problems.
- **Insurance:** A good business takes care of its employees. A database is needed for a business to have all the information about its beneficiaries who are covered for being a part of the company.

Key Feature: Hubber aims to be a great tool for business owners, managers and executives to manage business finance, human resources, sales and inventory in a *single platform*. It provides Software solutions for managing business and monitoring everyday activity of the business.

Competitive Edge

There are several companies on the market selling software products for this target segment. Hubber will leverage their competitive edge by incorporating an easy to use, scaleable , ***Single platform*** which has a low cost overhead to a business. Hubber is convinced that when companies enjoy what they are doing they are likely to use the product instead of having to be forced to use it.

Keys to Success

- Develop scalable software that is constructive and easy to use. If it is not easy and efficient, it likely will not be used.
- Implement a strong marketing campaign to develop awareness of the software and its benefits.
- Design strict financial controls for the organization.

Objectives

- Increase sales by triple for the first three years.
- Achieve 10% market penetration by year two.

Section II: Use Cases:

Use case #1:

Title:	Company Policy
Actors:	Alex, Sam ,Tim
Description:	Alex is the new Ceo of the Company. Alex is also a member in the board of directors. Sam is a Client of the company. Tim is the Employee working for the comapny. Alex comes up with new ideas that will benefit the company. He plans to change some company policies and also post the company's goal to boost sales for next year in the message board. Sam and Tim can now see the changes in the company policies and the date posted.

Use case #2:

Title:	Departments/Branch

List of Functional Requirements

General User;

1. A general user shall have a first name.
2. A general user shall have a last name. .
3. A general user shall be a general user.
4. A general user shall be a registered user.
5. A general user shall have an account id.
6. A general user shall have a date created.
7. A general user can create only one account with a unique email.
8. A general user shall have a user id.
9. A general user shall be able to create an account.

Registered User:

10. A registered user shall be able to create an account.
11. A registered user shall have a first name.
12. A registered user shall have a last name.
13. A registered user shall have a date of birth.
14. A registered user shall have a user id.
15. A registered user shall be able to access the website.
16. A registered user shall be able to be an admin.
17. A registered user shall have a profile.
18. A registered user shall be a staff.
19. A registered user shall be an Employee.
20. A registered user shall have an employeeid.
21. A registered user shall be a registered customer.
22. A registered user shall be a vendor.
23. A registered user shall be able to view the receipt.
24. A registered user shall be able to make a payment
25. A registered user shall be able to view the tasklist.
26. A registered user shall be able to view the schedule.

- 27. A registered user shall be able to view the department.
- 28. A registered user shall be able to view the product.
- 29. A registered user shall be able to buy the product/services.
- 30. A registered user shall be able to receive a salary.
- 31. A registered user shall have a start date.
- 32. A registered user shall have an end date.
- 33. A registered user shall have a department.
- 34. A registered user shall have a position.
- 35. A registered user shall access company devices.

Profile:

- 36. A profile shall have an avatar
- 37. A profile shall have a profile id
- 38. A profile shall have an alias.

Client

- 39. A client shall have client id.
- 40. A client shall have an account
- 41. A client shall be able to assign projects to a company.
- 42. A client shall have a project id.

Account

- 43. An account shall have an account id.
- 44. An account shall have credentials
- 45. An account shall have profile
- 46. An account shall have a branch.
- 47. An account shall have an address
- 48. An account shall have a date created.
- 49. An account shall be a general user.
- 50. An account shall comply with the company description.

Credentials:

- 51. A credential shall have an account id.
- 52. A credential shall have a password.
- 53. A credential shall have a valid email.

Address:

- 54. An address shall have a street.
- 55. An address shall have a city.
- 56. An address shall have a state.
- 57. An address shall have a zip code.
- 58. An address shall have a user.

- 59. An address shall have an employee.
- 60. An address shall have a country.
- 61. An address shall have an address id.
- 62. An address shall have a company.

Company:

- 63. Company shall have an address.
- 64. Company shall have an employee.
- 65. Company shall have a company id.
- 66. A company shall have a general user.
- 67. A company shall have assigned projects.
- 68. Company shall have a Ceo
- 69. A company shall have a board of directors.
- 70. A company shall have a Company Description.
- 71. A company shall have a Message Board.

BoardOfDirectors:

- 72. A board of directors shall have ceo
- 73. A board of directors shall have company.
- 74. A board of directors shall have a message board.
- 75. A board of directors shall have company descriptions.

Company Description:

- 76. Company Description shall have privacy policy.
- 77. Company Description shall have terms of use.
- 78. Company Description shall have a date posted.

Ceo:

- 79. A Ceo shall have an address.
- 80. A Ceo shall have a company.
- 81. A Ceo shall have a board of directors.
- 82. A Ceo shall have an email.
- 83. A Ceo shall have a valid phone number

Task:

- 84. A task shall have job id.
- 85. A task shall have a work id.
- 86. A task shall have a manager.
- 87. A task shall have a contract.
- 88. A task shall have a full time position.
- 89. A task shall be done by a part time employee.
- 90. A task shall have an employee.
- 91. A task shall have a company project

Company Project:

- 92. A Company Project shall have a project id.
- 93. A Company Project shall be assigned by the company.
- 94. A Company Project shall have a job id.
- 95. A Company Project shall have a work id.
- 96. A Company Project shall have a manager id.
- 97. A Company Project shall have a status.

Status:

- 98. A status shall have project id.
- 99. A status shall have a complete date.
- 100. A status shall be incomplete by default.

Manager:

- 101. A manager shall have manager id.
- 102. A manager shall be an employee.
- 103. A manager shall have an employee id.
- 104. A manager shall manage company projects.
- 105. A manager shall have a task.

Employee:

- 106. An employee shall have employee id.
- 107. An employee shall have first name
- 108. An employee shall have a last name.
- 109. An employee shall have a middle name.
- 110. An employee shall have a salary.
- 111. An employee shall have a manager
- 112. An employee shall have a supervisor.
- 113. An employee shall have a project id.
- 114. An employee shall have a work id
- 115. An employee shall belong to a company.
- 116. An employee shall work on multiple projects.
- 117. An employee shall be a registered user.
- 118. An employee shall have access to company devices.
- 119. An employee shall be able to process payments.
- 120. An employee shall have an hire date.
- 121. An employee shall be a part of the company.

Payment Type;

- 122. A payment type shall be a debit card.

- 123. A payment type shall be a credit card.
- 124. A payment type shall have a valid expiration date.
- 125. A payment type shall have a valid name.

Company devices:

- 126. A company device shall have a device id.
- 127. A company device shall be able to process payments.
- 128. A company device shall have a project id.
- 129. A company device shall have a project status.

Non-Functional Requirements

Security:

- 1) Verification of email and phone number shall be required upon sign in.
- 2) Username, password, and email shall be required to create an account.
- 3) The passwords shall be saved as encrypted.
- 4) To post a textbook a user shall be registered with an account.
- 5) Photos shall be saved as binary.

Privacy:

- 6) User personal information such as passwords, email, phone number, transactions shall be private.
- 7) Registered user's password shall be saved into the MySQL database.
- 8) Registered user's email shall be saved into the MySQL database.
- 9) Registered user's phone numbers shall be saved into the MySQL database.
- 10) Posted textbooks shall be available to all users.
- 11) Inquiries about the textbook post shall be saved into the MySQL database.

Performance:

- 12) Everytime a user requests something on the website, the requests should be completed within 10 seconds.
- 13) The website should load within 5 seconds.
- 14) The inquiries between buyer and seller shall be in real time.
- 15) The selected textbooks shall stay in the cart upon page refresh.
- 16) The website shall be able to display textbooks within 5 seconds upon appropriate search.

System Requirements:

- 17) Technologies implemented in the website shall adhere to the CTO guidelines and implement all the technologies listed.
- 18) Website shall support Google chrome.

- 19)Website shall support Firefox.
- 20)Website shall support Safari and Internet Explorer.
- 21)Website shall be simple and user friendly.
- 22)Website shall support mobile devices.
- 23)Websites shall be responsive to all devices.

Marketing:

- 24)Each www page shall display the website logo.
- 25)Each www page shall have a contact section at the bottom.
- 26)Each www page shall have social media links about the website.

Content:

- 27)A navigation bar shall be present and shall be stucked to the top of the website.
- 28)A search bar shall be present within the navbar.
- 29)The website logo shall be present to the leftmost on the navigation bar.
- 30)The textbooks categorized shall be displayed in the center of the landing page.
- 31)The website shall have pleasant colors.
- 32)The website shall have trending books listed above textbook categories.
- 33)Login and Signup pages shall be accessible from the navbar.
- 34)The website shall have separate pages for each textbook category.
- 35)Each textbook category page shall have a textbooks posting feature.
- 36)Posted textbooks shall have an appropriate image size.
- 37)A website footer shall be present in all pages at the bottom.

Functionality:

- 38)The website shall be deployed to Amazon Cloud Service.
- 39)The website shall be allowing the users to interact in real time.
- 40) The website shall be easy to use and easy to navigate.
- 41)The website shall have a usage page.
- 42)The website shall do efficient and quick searching for the textbooks.
- 43)The website shall be allowing users to post many books.

Availability :

- 44)The textbooks shall be available upon appropriate searches.
- 45)Upon unsuccessful search, the page should display an error message.
- 46)The website should be accessible to any browser.
- 47)All the options to buy and sell textbooks shall be visible clearly.
- 48)The links to different pages shall be easily tracked.

49)Checkout should only be accessible when a user is successfully registered.

Fault Tolerance:

50)The website shall be able to handle the display errors.

51)The website shall load all the content upon refresh on an error.

Storage:

52)The textbooks posts shall be saved into the database without being overloaded.

53)The textbook posts shall be updated in the database.

54)The textbook posts shall be deleted from the database.

55)The general users shall be stored into the database.

56)The registered users shall be stored into the database.

57)The registered user's account shall be updated into the database.

58)The registered user's account shall be deleted from the database.

59)The registered user's email shall be saved into the database.

60)The registered user's password shall be saved into the database.

61)The registered user's phone number shall be saved into the database.

62)The textbook's name shall be stored into the database.

63)Textbook images shall be saved into the database.

64)Textbook titles shall be saved into the database.

65) Textbook conditions shall be saved into the database.

66) Textbook price shall be saved into the database.

67)All the inquiries about the textbook posts shall be saved into the database.

68)The department names shall be stored into the database.

69)The login user's cookie session shall be saved into the database.

Legal:

70)The copyright content policy shall be written explicitly at the bottom on all pages.

71)A link to terms and conditions shall be present at the bottom on all pages.

72)The website privacy policy shall be clearly visible at the bottom.

73)The contact information shall be visible to give feedback.

Environmental:

74)Final application code shall be sitting in the master branch.

75)A develop branch shall act as a mock master branch.

76)All contributed code shall be done on each member's branch.

77)The code shall be peer reviewed before merging to the develop branch.

78)The application shall be run and tested from the develop branch.

79)The application shall be deployed from the master branch on to Amazon Cloud Service.
